

Program :B.tech(CSE)

Specialization :AIML

Course Title :AI Assisted Coding

Course Code :24CS002PC215

Semester :3rd semester

Academic Session :2025-2026

Name of Student :Alla Ashish

Enrollment No. :2403A51249

Batch No. :01

Date :04/11/2025

#LAB ASSIGNMENT-16.2

#TASK DESCRIPTION-1:

Task: Ask AI to design a schema for a Library Management System
(Tables: Books, Members, Loans).

SQL Code

```
CREATE TABLE Members (
    member_id INT PRIMARY KEY,
    name VARCHAR(100),
    email VARCHAR(100) UNIQUE,
    join_date DATE
);

CREATE TABLE Books (
    book_id INT PRIMARY KEY,
    title VARCHAR(200),
    author VARCHAR(100),
    available BOOLEAN
);

CREATE TABLE Loans (
    loan_id INT PRIMARY KEY,
    member_id INT,
    book_id INT,
    loan_date DATE,
    return_date DATE,
    FOREIGN KEY (member_id) REFERENCES Members(member_id),
    FOREIGN KEY (book_id) REFERENCES Books(book_id)
);
```

#PROMPT:

Design an SQL schema for a Library Management System that includes three tables — Members, Books, and Loans.

Each table should have appropriate primary keys, foreign keys, and relevant columns such as member details, book details, and loan records.

Write complete and executable SQL CREATE TABLE statements.

Also include sample INSERT statements to add example data into each table.

Design an SQL schema for a Library Management System that includes three tables — Members, Books, and Loans.
Each table should have appropriate primary keys, foreign keys, and relevant columns such as member details, book details, and loan records.
Write complete and executable SQL CREATE TABLE statements.

#TASK DESCRIPTION-2:

Error Insert Data

Task: Ask AI to generate INSERT INTO queries for the schema above (3 sample records per table). Give me simple and perfect prompt for this

#PROMPT:

Generate SQL INSERT INTO statements for the Library Management System schema (tables: Members, Books, and Loans).
Add 3 sample records per table with realistic values.

#CODE:

```

⌚ Connect to MSSQL
-- Sample inserts for Library Management System

INSERT INTO Members (member_id, first_name, last_name, email, phone, address, join_date, membership_type, status) VALUES
(1, 'Emily', 'Chen', 'emily.chen@example.com', '555-0123', '12 Maple St, Springfield', '2021-03-15', 'Regular', 'Active'),
(2, 'Marcus', 'Davis', 'marcus.davis@example.com', '555-0456', '89 Oak Ave, Springfield', '2020-11-02', 'Premium', 'Active'),
(3, 'Priya', 'Singh', 'priya.singh@example.com', '555-0789', '34 Pine Rd, Springfield', '2022-07-21', 'Regular', 'Inactive');

INSERT INTO Books (book_id, title, author, isbn, publication_year, publisher, copies_total, copies_available, genre) VALUES
(101, 'To Kill a Mockingbird', 'Harper Lee', '9780061120084', 1960, 'J.B. Lippincott & Co.', 4, 2, 'Fiction'),
(102, 'Clean Code', 'Robert C. Martin', '9780132350884', 2008, 'Prentice Hall', 3, 1, 'Programming'),
(103, '1984', 'George Orwell', '9780451524935', 1949, 'Secker & Warburg', 5, 5, 'Dystopian');

INSERT INTO Loans (loan_id, book_id, member_id, loan_date, due_date, return_date, status, fine_amount) VALUES
(1001, 101, 1, '2025-10-01', '2025-10-15', '2025-10-12', 'Returned', 0.00),
(1002, 102, 2, '2025-10-10', '2025-10-24', NULL, 'On Loan', 0.00),
(1003, 103, 3, '2025-09-20', '2025-10-04', '2025-10-10', 'Returned Late', 5.00);

```

#TASK DESCRIPTION-3:

Basic Queries

Task: Use AI to generate a query to list all books borrowed by a specific member

#PROMPT:

Generate an SQL query to list all books borrowed by a specific member from the Library Management System database (tables: Members, Books, and Loans).

The query should display the member's name, book title, author, and loan date.

SELECT

 Generate an SQL query to list all books borrowed by a specific member from the Library Management System database (tables: Members, Books, and Loans).
The query should display the member's name, book title, author, and loan date.

Ask or edit in context Auto ▾ ➤ ▾

#CODE:

```
/Users/deeks/SELECT.SQL
  ⚭ Connect to MSSQL
1  SELECT
2      Members.name AS member_name,
3      Books.title AS book_title,
4      Books.author AS book_author,
5      Loans.loan_date AS loan_date
6  FROM
7      Members
8  JOIN |
9      Loans ON Members.id = Loans.member_id
10 JOIN
11     Books ON Loans.book_id = Books.id
12 WHERE
13     Members.id = ?; -- Replace ? with the specific member's ID
```

#OUTPUT:

#TASK DESCRIPTION-4:

Update and Delete Queries

Task: Generate queries with AI for:

- Updating a book's availability to FALSE when borrowed.
- Deleting a member record safely. Give me perfect and simple prompt

#PROMPT:

Generate SQL queries for the Library Management System to:

1. Update a book's available status to FALSE when it is borrowed.
2. Safely delete a member record (ensure related loan records are handled properly).

#CODE:

```
◊ Connect to MSSQL
-- 1 Update a book's available status to FALSE when it is borrowed
UPDATE books
SET available = FALSE
WHERE book_id = ?; -- Replace ? with the actual book ID

-- 2 Safely delete a member record (ensure related loan records are handled properly)
DELETE FROM loans
WHERE member_id = ?; -- Replace ? with the actual member ID

DELETE FROM members
WHERE member_id = ?; -- Replace ? with the actual member ID
```

#OUTPUT:

```
◊ Connect to MSSQL
1 -- 1 Update a book's available status to FALSE when it is borrowed
2 UPDATE books
3 SET available = FALSE
4 WHERE book_id = ?; -- Replace ? with the actual book ID
5
6 -- 2 Safely delete a member record (ensure related loan records are handled properly)
7 DELETE FROM loans
8 WHERE member_id = ?; -- Replace ? with the actual member ID
9
10 DELETE FROM members
11 WHERE member_id = ?; -- Replace ? with the actual member ID
```

----- Thank You-----
